

S Force - Protection from the Environment

ebm-papst St Georgen have developed the ultimate performer in compact fan technology—S Force.

The new technology from ebm-papst has developed compact fans with:

- Superior air flow
- Steep pressure curves
- Superb efficiency
- Silent commutation
- Sturdy design

Protection against moisture

- A coating on the motor and the printed circuit board gives protection of the fans electronics against moisture and condensation.

IP54

- The motor and circuit board are encapsulated to protect against splashed water humidity and dirt. High protection classes such as IP67 are available.

Protection against salt spray fog

- Salt fog is particularly demanding of the protection of the fans. Materials choices coatings and insulation are all used to ensure salt fog protection.

Stainless steel bearings

- A range of bearing systems are available including stainless steel. Fully open bearings, metal seal and PTFE seal are all available to ensure the correct level of environmental protection as specified.
