

DEOS: COSMOS OPEN Controller

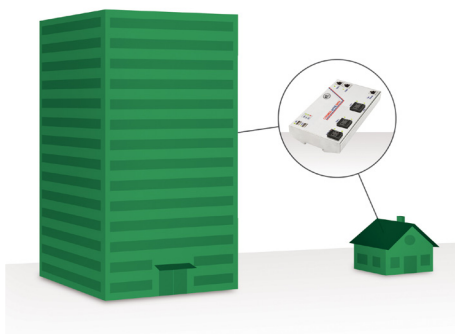

Direct serial data bus communication between DEOS and ebm-papst fans.

For more than 44 years, DEOS have been successfully supplying control units to the building market: As a German technology and manufacturing company, DEOS has grown from strength to strength by a combination of innovation and quality.

With BACNET and MODBUS RTU systems as backbones to its control structures, up to 128 ebm-papst fans can be connected directly via the RS-485 interface to the COSMOS OPEN controller.

Hereby in-and outputs as well as wiring can be saved and additional information can be displayed on the central building control system.

The product portfolio covers DDC Hard- and Software, a powerful GLT - BACnet-OWS - and also sensors, actuators and other field devices. With this, the broad spectrum of the measuring and control technology will be covered.

The measuring and control technology includes the areas heating, ventilation, climate, shadowing and lighting control to realize best possible energy saving results.
